

"The Dark side of the Coal"

11 December (10:00) - 16 December (20:00)

A mini-exhibition displaying objects made of bituminous coal as the graduation work of young artists from the School of Form in Poznań. The exhibition has an unconventional opportunity to bring the issue of coal combustion to a wider audience. It is a kind of a provocation that is to encourage reflection and inspire questions about the use of coal.

Free admission
